Insights and Recommendations

Key Insights

- Malaria was the most common diagnosis, accounting for 17% of all admissions.
- Heart Disease recorded the highest average treatment cost at ₦872,781.
- Private hospitals cost approximately 70% more than public hospitals.
- Tuberculosis had the highest mortality rate at 41.2%.
- HMO was the most frequently used payment method at 21.1%.
- Lagos and Kebbi recorded the highest number of patient admissions at 45 each.

Recommendations

- Strengthen malaria prevention efforts in highest admission state such as Plateau, Ogun, Gombe and Kebbi, where case concentration is highest.
- Expand health insurance coverage to reduce reliance on out-of-pocket payment and improve financial access to care.
- Improve funding and infrastructure in public hospital to reduce the cost gap compared to private facilities.
- Prioritize interventions for high mortality conditions such as tuberculosis, stroke and heart disease.
- Enhance early detection and treatment programs for tuberculosis to reduce long hospital stays and mortality rates.
- Address regional healthcare gaps by improving resources in high-burden, lower-capacity states.
